A **dynamic view** of the integrated workflow of each business line

Treasury departments must gain an enterprise-wide view to drive profitability and optimise the allocation of capital to the business.

Transforming the bank's **growing** treasury function

Today's burgeoning regulatory landscape demands a more integrated and enterprise-wide business approach, transforming the role of the treasurer to a proactive business partner.

Treasury must move away from its traditional static to a proactive view looking at how to enhance profitability and assess how best to allocate capital to the business as an ongoing process.

Rigid, fragmented systems must give way to flexible cross-functional platforms to facilitate the fast, accurate real-time data management that is critical for the understanding of current and future funding requirements.

As regulation increases and liquidity requirements become more stringent, banks must develop and demonstrate flexible solutions to ensure adequate capital allocation and robust risk management practices are in place.

The cost of compliance

The combination of stringent regulatory landscape, sensitivity to systemic risk and sustained low interest rates mean treasuries must understand the true cost of compliance, by optimising their liquidity buffer from both risk and cost perspectives.

Faster decision-making

With the front office moving from 'post-deal' to 'pre-deal' view, it is essential that treasury has access to enterprise-wide data to enable deal-by-deal management in real-time to assess the impact and preview business margins, including the cost of regulation and funding.

Coherent data

With more correlated activities, treasuries must think about aggregation and stress testing across the whole banking and trading book. Creating the 'dynamic balance sheet' required in today's environment relies on accurate forecasting, simulation and stress testing.

Efficient treasury process

Through optimisation, the treasury process becomes proactive, enabling a real-time view of profitability by business line: cost by trade, by capital and by funding. This gives the bank an ongoing view of where it can optimise to deliver a higher return on investment.

Reacting to regulatory change

Regulatory changes are here to stay for the foreseeable future. Therefore it is essential the treasury adopts a flexible and innovative approach that enables not only more transparent liquidity management, but also proactively meets growing regulatory demands.

Misys **FusionCapital** Treasury

Delivering greater strategic planning, execution and control in one single integrated solution.

Increased clarity

Providing a holistic risk view across the banking and trading books in a single framework, FusionCapital Treasury promotes dynamic decision-making based on seamless management of trading, risk, liquidity and profitability.

Profit optimisation

Improved workflow optimises profits across the enterprise, from source systems for asset liability management (ALM) to board or financial reporting.

With full end-to-end funds transfer pricing (FTP) execution, treasurers and treasury departments improve

their profitability with an integrated and more active view, so the bank can benefit from better capital allocation and optimised liquidity buffers.

Better decision-making

Through its flexible and open analytics platform, FusionCapital Treasury offers improved accuracy and proactive balance sheet modelling.

With the ability to perform high volume calculations faster than event-based computation, FusionCapital Treasury provides you with precise simulation and stress testing.

Misys FusionCapital Treasury

Steering the bank's financial assets, governing regulatory reporting and effectively managing liabilities.

Regulatory compliance

Complex regulatory reporting is simplified by end-to-end control and full visibility of all transactions from source systems to reporting beyond treasury to ease strategic planning, reporting, and decision-making.

FusionCapital Treasury takes a proactive compliance approach, so there is no constant repeat investment in new regulations.

Innovative technology

Using a big data approach, analysis, drill-down and reporting is made simple from one intuitive dashboard, ensuring you have all the information you need for fast and effective decision-making.

Flexible tools

FusionCapital Treasury makes the most of your existing technology while deploying improved, flexible tools that can meet changing market and regulatory demands.

- Built on a common data model
- Comprehensive scenario analysis
- Unique interface bringing liquidity, risk and profitability together in one intuitive screen
- Calculation engine enabling key analytic measures such as liquidity and IRR gaps, NPV, sensitivities, FTP and margin analysis, and at-risk measures including VaR, EaR and ES
- Reporting of LCR and NSFR for international and national discretions.
